ORDERS & DELIVERY

Delivery Times

Delivery times at PixelForge depend on product availability, order processing, warehouse operations, and the shipping method selected during checkout. We aim to provide realistic delivery estimates and communicate significant changes as early as possible.

All delivery estimates refer to business days unless otherwise stated. Business days are Monday through Friday, excluding Swedish public holidays.

Standard Delivery for In-Stock Products

Most in-stock products are delivered within 2–4 business days after they have been dispatched from our warehouse. This estimate applies to standard deliveries within Sweden and includes products such as graphics cards, processors, keyboards, mice, and other commonly stocked accessories.

The delivery estimate begins when the order has been dispatched, not when the purchase was placed. Customers receive a shipping confirmation when their package leaves the warehouse.

Delivery to remote locations or areas with limited transportation services may require additional time. Shipping providers may also experience temporary delays during periods of high demand.

Order Processing

Orders are normally processed within one business day after payment has been confirmed. During processing, PixelForge verifies payment, checks product availability, and prepares the items for shipment.

Orders placed on weekends or Swedish public holidays are normally processed on the next business day. Orders placed late in the afternoon may also begin processing the following business day.

An order may require additional verification if the payment provider identifies an issue or if important delivery information is missing. PixelForge may contact the customer before continuing with the order.

Prebuilt Gaming PCs

Prebuilt gaming PCs require additional preparation compared with individual components. Before shipping, each system undergoes a quality inspection that may include hardware checks, operating system verification, and basic stability testing.

The estimated total delivery time for a standard prebuilt gaming PC is normally 5–8 business days after payment confirmation. This includes preparation, testing, dispatch, and transportation.

Some configurations may require additional assembly or testing. If the estimated delivery time differs from the standard timeframe, this information should be displayed on the product page or communicated before shipment.

Products That Are Temporarily Out of Stock

Products marked as temporarily unavailable cannot always be shipped immediately. If PixelForge accepts an order for an out-of-stock product, the customer will receive an estimated restocking date when that information is available.

Restocking dates are estimates provided by suppliers and may change. If a product cannot be delivered within the expected timeframe, PixelForge will inform the customer and explain the available options, including waiting for the product or requesting cancellation.

Customers are not required to accept an indefinite delay. An order that has not been dispatched can generally be cancelled by contacting customer support.

Orders Containing Multiple Products

When an order includes both available and unavailable products, PixelForge may wait until all products are ready before shipping the order. In some cases, the available products may be shipped separately.

Customers will be informed if their order is divided into multiple shipments. Each shipment may have its own estimated delivery date and tracking number.

Unexpected Delivery Delays

Delivery estimates may be affected by severe weather, transportation disruptions, warehouse problems, public holidays, or unusually high order volumes.

If PixelForge becomes aware of a significant delay, we will attempt to notify the customer by email. The notification should explain the reason for the delay when known and provide an updated estimate if possible.

What to Do If Your Order Is Late

Customers should first check the tracking information included in their shipping confirmation. Tracking updates may occasionally be delayed even when a package is moving normally.

If the estimated delivery date has passed and no meaningful tracking update has appeared for several business days, customers should contact PixelForge support with their order number.

For shipping costs and delivery methods, see Shipping Information. For details about tracking updates and shipment statuses, see Order Tracking.
