RETURNS & REFUNDS

Damaged Products

PixelForge takes product quality and safe transportation seriously. Despite careful packaging and handling, products can occasionally arrive damaged, defective, or incomplete.

This document explains how customers should report these situations and what information helps PixelForge investigate and resolve the problem efficiently.

Inspecting a Delivery

Customers are encouraged to inspect the external packaging when receiving a shipment. Visible damage may include crushed corners, punctures, torn packaging, water exposure, or signs that a package has been opened during transportation.

If significant damage is visible, customers should photograph the package before opening it when reasonably possible. The photographs may help identify whether damage occurred during transportation.

Customers should also inspect the products and included accessories after opening the package. Packaging materials should be retained until any potential delivery problem has been resolved.

Reporting Transportation Damage

Customers should contact PixelForge support as soon as possible after discovering transportation damage. Reporting the issue promptly makes it easier to investigate the shipment with the transportation provider.

PixelForge recommends reporting visible transportation damage within 48 hours of delivery when practical. This is a recommended reporting timeframe, not a limitation of the customer's statutory complaint rights.

The customer should provide their order number, a description of the damage, and photographs of the affected product and packaging if available.

Customers should not attempt to repair a visibly damaged product before receiving guidance from support, particularly when the product contains electrical components.

Products That Do Not Work Correctly

A product may appear undamaged externally but fail to function correctly when installed or used.

Examples include a graphics card that produces no display output, a monitor with display defects, a keyboard with non-functioning keys, or a gaming PC that fails to start.

Customers should first follow any safe and reasonable troubleshooting instructions included with the product. If the issue remains, they should contact PixelForge support and describe the symptoms.

For complex products, support may request additional information such as the product model, serial number, error messages, or a description of the computer configuration.

Customers should not open power supplies or attempt other potentially dangerous repairs.

Missing Products or Accessories

If a delivery appears incomplete, customers should first check whether the order was divided into multiple shipments. Orders containing gaming PCs and smaller accessories may arrive in separate packages with different tracking numbers.

The shipping confirmation email normally identifies the dispatched products and provides tracking information for the shipment.

If an item is missing and no additional shipment is expected, customers should contact PixelForge support with their order number and details of the missing product.

Missing cables, adapters, manuals, or other included accessories should also be reported so that PixelForge can determine the appropriate solution.

Incorrect Products

If a customer receives a different product from the one ordered, they should contact support before returning or installing the item.

The customer should provide the order number, the product received, and the product originally purchased. Photographs of product labels may help verify the mistake.

When PixelForge confirms that an incorrect item was supplied, we will arrange an appropriate correction without charging the customer for reasonable return shipping.

How PixelForge Handles Complaints

When a complaint is received, PixelForge reviews the order details and the information provided by the customer. Depending on the circumstances, support may recommend troubleshooting, arrange a return for inspection, offer a replacement, or propose another remedy.

Under Swedish consumer protection rules, customers may have rights to repair, replacement, price reduction, or cancellation of the purchase depending on the nature of the defect and the applicable legal conditions.

PixelForge does not automatically require customers to accept a refund instead of another remedy where consumer law provides otherwise.

Returning a Damaged or Defective Product

If a return is necessary, support will provide packaging and shipping instructions. Customers should use appropriate protective materials to prevent additional damage during transportation.

For accepted complaints involving defective, damaged, or incorrectly delivered products, PixelForge covers reasonable return shipping costs.

Large or heavy items, including gaming PCs and monitors, may require a specially arranged collection or transportation service.

Customers should back up personal files and remove sensitive information from computers and storage devices before returning them whenever reasonably possible.

Replacement Products and Refunds

If a replacement is approved, PixelForge will provide information about availability and the expected dispatch date. Replacement delivery times may depend on current stock levels.

If reimbursement is the appropriate remedy, the refund is normally processed through the original payment method. The time required for the payment to appear depends on the payment provider.

Customers should retain their complaint reference and any related correspondence until the case has been resolved.

Customer Rights and Further Assistance

A recommendation to report transportation damage within 48 hours does not remove statutory rights. Under Swedish consumer law, consumers generally have a three-year right to complain about defects in goods, subject to the applicable requirements.

For instructions about ordinary returns, see Return Policy. For reimbursement procedures, see Refund Process. For problems involving tracking or missing shipments, see Order Tracking.
