WARRANTY & PRIVACY

Personal Data & GDPR

PixelForge processes personal information when customers create accounts, purchase products, contact support, or use services provided through our website. This document explains the main categories of personal data we process, why the information is needed, and which rights individuals have under the General Data Protection Regulation (GDPR).

PixelForge AB is the data controller for personal data processed for the purposes described in this document, unless otherwise stated for a specific service.

What Personal Information Do We Collect?

When customers place an order, PixelForge may collect their name, email address, telephone number, billing address, delivery address, and information about the products purchased.

Customers who create an account may also provide login credentials and account preferences. Passwords should be stored using appropriate cryptographic hashing rather than in readable form.

When customers contact support, we may process correspondence, order references, product information, and other details necessary to resolve the request.

Technical information such as IP addresses, browser characteristics, and security logs may also be processed when necessary to operate and protect the website.

PixelForge does not require customers to provide more personal information than is reasonably necessary for the relevant service.

Why Do We Process Personal Data?

PixelForge processes personal data for several purposes, including completing purchases, delivering orders, providing customer support, handling returns, and fulfilling legal obligations.

Order and delivery information is generally processed because it is necessary to perform a contract with the customer.

Certain financial records must be retained to comply with accounting and tax obligations. Processing necessary for those purposes is based on legal obligations.

Security monitoring and prevention of fraudulent activity may rely on legitimate interests, provided the relevant requirements and balancing assessments are satisfied.

Marketing communications that require consent are only sent when an appropriate legal basis has been established. Customers can withdraw marketing consent at any time.

Payment Information

Payments may be processed through external payment service providers. PixelForge receives the transaction information needed to confirm and administer purchases but does not normally store complete payment card details in its own application database.

Payment providers may process additional information under their own privacy notices and legal responsibilities.

Sharing Information With Other Companies

PixelForge may share necessary personal information with delivery providers, payment processors, hosting providers, and other service partners involved in operating the business.

For example, a shipping provider may receive the customer's name, delivery address, and contact details to complete a delivery.

Service providers acting as data processors must process information according to appropriate agreements and instructions. Personal information is not sold to advertisers.

How Long Is Personal Data Stored?

PixelForge retains personal information only for as long as necessary for the relevant purpose or as required by law.

Accounting information may need to be retained for seven years under Swedish bookkeeping requirements. Certain order records may therefore remain stored even after a customer account has been deleted.

Support correspondence and account information are reviewed according to their operational purpose and applicable retention rules. Data that is no longer required should be deleted or anonymized securely.

Retention periods may differ depending on the type of information and the legal basis for processing.

Your Rights Under GDPR

Individuals have several rights under GDPR, subject to applicable conditions and exceptions.

- **Right of access:** Request information about personal data being processed and obtain a copy where applicable.
- **Right to rectification:** Request correction of inaccurate or incomplete personal information.
- **Right to erasure:** Request deletion of personal information when the legal requirements are satisfied.
- **Right to restriction:** Request that certain processing activities be restricted in qualifying circumstances.
- **Right to data portability:** Receive certain personal information in a structured, commonly used, machine-readable format.
- **Right to object:** Object to processing based on legitimate interests or to direct marketing.
- **Right to withdraw consent:** Withdraw consent for processing that relies on consent.

These rights are not absolute. For example, PixelForge may be required to retain transaction records even when a customer requests deletion of their account.

Requesting Access or Deletion

Customers can contact PixelForge support to submit a personal data request. The request should clearly describe the action being requested.

PixelForge may need to verify the requester's identity before disclosing, changing, or deleting personal information. Identity verification should be proportionate and avoid unnecessary collection of additional data.

GDPR requests must generally be answered within one month. In certain circumstances, this period may be extended by up to two additional months, with the individual informed of the extension and reasons within the initial month.

Individuals may also lodge a complaint with the Swedish Authority for Privacy Protection, Integritetsskyddsmyndigheten (IMY).

International Data Transfers

If personal information is transferred outside the European Economic Area, PixelForge must ensure that an appropriate transfer mechanism and required safeguards are in place.

The applicable safeguards depend on the destination, service provider, and circumstances of the transfer.

Protecting Personal Information

PixelForge uses technical and organizational measures intended to protect personal information against unauthorized access, accidental loss, and improper disclosure.

These measures may include encrypted connections, access controls, secure authentication, backups, and security monitoring.
