WARRANTY & PRIVACY

Cookies & Privacy

The PixelForge website may use cookies and similar technologies to provide essential functionality, remember user preferences, improve website performance, and understand how visitors interact with the store.

A cookie is a small piece of information stored on a user's device by a website. Cookies can be used to maintain a shopping cart, keep a user signed in, or remember selected settings between visits.

This document explains the categories of cookies used by PixelForge and how visitors can manage their preferences.

Strictly Necessary Cookies

Strictly necessary cookies support essential website functions and services explicitly requested by the user.

Examples include maintaining shopping cart contents, managing authentication sessions, remembering security-related settings, and supporting checkout operations.

These cookies may be used without consent when they are strictly necessary for the requested service, but visitors must still receive appropriate information about their use.

Disabling essential cookies through browser settings may prevent certain website features from functioning correctly.

Analytics Cookies

Analytics cookies may help PixelForge understand how visitors use the website. For example, analytics can provide information about frequently visited pages, navigation patterns, and technical errors.

PixelForge uses analytics information to evaluate website performance and identify areas that may need improvement.

Analytics cookies that are not strictly necessary require appropriate consent before being placed or accessed. Visitors who decline analytics cookies should still be able to browse and purchase products through the website.

Marketing Cookies

Marketing cookies may be used to measure advertising effectiveness or support relevant promotional campaigns.

These cookies may involve third-party advertising services and can potentially track activity across multiple websites.

PixelForge only activates non-essential marketing cookies when the visitor has provided valid consent. Declining marketing cookies does not prevent access to ordinary store functionality.

Cookie Consent and Preferences

When visitors first access the PixelForge website, they may be presented with a cookie consent interface explaining the available categories.

Visitors should be able to accept or reject non-essential cookies and make meaningful choices about optional tracking.

Consent must be freely given, specific, informed, and unambiguous where required. Visitors must also be able to withdraw consent as easily as they gave it.

PixelForge should provide a way to reopen cookie preferences and update previous choices without requiring customers to contact support.

Session Cookies and Persistent Cookies

Session cookies are generally removed when the browsing session ends. They are commonly used for temporary functions such as maintaining a login session or shopping cart state.

Persistent cookies remain on the device for a defined period or until they are removed. They may be used to remember preferences or consent decisions between visits.

The duration of each cookie depends on its purpose and configuration. Cookies should not be retained longer than necessary for their intended function.

Managing Cookies in Your Browser

Most modern browsers allow users to view, block, or delete stored cookies through privacy and security settings.

Customers can also use private browsing modes or browser features designed to limit cross-site tracking.

Deleting cookies may sign users out of their accounts, remove remembered preferences, or clear temporary shopping cart information.

Browser controls do not replace the website's responsibility to obtain valid consent for non-essential cookies.

Third-Party Services

Some PixelForge services may rely on external providers for payment processing, website analytics, or embedded functionality.

These providers may use cookies or similar technologies according to their specific role and applicable privacy requirements.

PixelForge must ensure that appropriate information is provided about third-party technologies and that consent requirements are respected.

Cookies and Personal Data

Certain cookies and online identifiers may constitute personal data when they can identify or be linked to an individual.

Where personal data is processed, GDPR requirements apply in addition to the rules governing access to information stored on users' devices.

For information about personal data processing, retention, and individual rights, see Personal Data & GDPR. For account-related preferences and security, see Customer Accounts.
