WARRANTY & PRIVACY

Customer Accounts

A PixelForge customer account provides a convenient way to manage purchases, review order information, and maintain personal preferences. Customers can use an account to access features that would otherwise require entering the same information repeatedly.

Creating an account is optional for ordinary purchases when guest checkout is available. Customers should only provide information necessary for the services they choose to use.

Creating a Customer Account

Customers can register an account by providing a valid email address, choosing a password, and completing any required verification steps.

The email address is used for account identification, important service notifications, and account recovery.

Customers should choose a strong, unique password that is not reused across other websites. Password managers can help generate and store secure passwords.

PixelForge may require email verification before enabling certain account features or accepting changes to sensitive information.

Signing In and Account Security

Customers should keep their login credentials confidential and avoid sharing passwords with other people.

PixelForge uses security measures intended to protect account information, including encrypted connections and appropriate password storage practices.

Repeated unsuccessful login attempts may trigger temporary security restrictions to reduce the risk of unauthorized access.

Customers using shared or public computers should sign out after completing their session and avoid saving passwords in browsers they do not control.

Resetting a Forgotten Password

Customers who forget their password can request a password reset through the login page.

A reset link or verification procedure is sent to the email address associated with the account. Password reset links should be time-limited and should not reveal the customer's existing password.

If the reset email does not arrive, customers should check their spam folder and verify that they entered the correct email address.

Customers who no longer have access to their registered email address should contact support. Additional identity verification may be necessary before account recovery can proceed.

Updating Personal Information

Signed-in customers may update certain account details, such as their name, telephone number, and saved delivery address.

Changes to saved account information do not necessarily update orders that have already been placed. Customers who need to change the delivery address for an active order should contact support as soon as possible.

Once an order has entered warehouse processing or shipping, changes to delivery information may no longer be possible.

Viewing Previous Orders

Customer accounts may display previous purchases, order numbers, payment status, and shipment information.

Orders placed using guest checkout may not automatically appear in an account created later, even when the same email address was used.

Customers should retain order confirmation emails because they may be needed for returns, warranty claims, or support requests.

For details about delivery statuses and tracking numbers, see Order Tracking.

Managing Communication Preferences

Customers may be able to choose whether they receive optional marketing communications from PixelForge.

Marketing preferences are separate from essential service notifications. Customers may continue to receive necessary messages about orders, payments, security, or account changes even when marketing messages have been disabled.

Where marketing processing relies on consent, customers can withdraw that consent at any time.

Requesting Account Deletion

Customers can request deletion of their PixelForge account by contacting support. PixelForge may require identity verification before completing the request.

Account deletion generally removes access to the account and information that is no longer required for another lawful purpose.

However, certain transaction records may need to be retained to comply with accounting, tax, consumer protection, or other legal obligations.

For example, accounting information may need to be stored for seven years under Swedish bookkeeping requirements even if the associated customer account has been closed.

Deleting an account does not automatically cancel active orders, eliminate outstanding payment obligations, or terminate an ongoing warranty claim.

Unauthorized Account Activity

Customers who suspect that someone has accessed their account without permission should change their password immediately if they can still sign in.

They should also review recent orders and account details for unexpected changes and contact PixelForge support if suspicious activity is identified.

PixelForge may temporarily restrict account access while investigating a potential security incident.

Personal Data and Privacy Rights

Customers have rights regarding their personal information under GDPR, including rights of access, correction, and erasure in qualifying circumstances.

Account deletion and GDPR erasure requests are related but not identical. Some information may remain stored because PixelForge has a separate legal obligation or another valid basis for retaining it.

For more information about personal data processing and individual rights, see Personal Data & GDPR. For information about cookies and website tracking, consult Cookies & Privacy.
