PAYMENTS

Payment Methods

PixelForge offers several payment options to make purchasing gaming computers, components, and accessories convenient and secure. The payment methods available for a particular order are displayed during checkout and may depend on the order value, customer eligibility, and payment provider requirements.

All prices displayed in the PixelForge online store are stated in Swedish kronor (SEK) and include applicable Swedish VAT unless otherwise indicated.

Available Payment Methods

PixelForge supports payments using Visa and Mastercard debit or credit cards. Customers may also be offered payment through Swish, invoice, or instalment plans when these services are available through our payment partners.

Not every payment method is necessarily available for every purchase. For example, invoice and instalment options may require additional eligibility checks by the payment provider.

The available payment methods and any associated fees are displayed before the customer confirms the purchase.

Card Payments

Customers paying by card must provide the payment information requested by the payment provider. Card transactions may require additional verification through 3D Secure or another authentication procedure.

PixelForge does not normally store complete payment card numbers or card security codes in its own application database. Sensitive payment information is processed by authorized payment service providers.

Depending on the payment arrangement, an amount may initially be reserved on the customer's card before the transaction is finalized. The timing of the final charge depends on the payment provider and the applicable checkout terms.

If a card payment is declined, customers should verify their payment details, available funds, and any authentication requests from their bank.

Swish Payments

When Swish is available at checkout, customers can complete payment using the Swish application and the verification method required by their bank.

The payment must be approved within the time allowed by the payment provider. If the customer closes the payment process before completing authorization, the order may remain unpaid or fail to be confirmed.

Customers should verify the payment status before attempting to place the same order again, particularly if their banking application indicates that money has already been transferred.

Invoice Payments

Invoice payments may be offered through an external payment provider. Customers choosing this option may be required to provide additional identification information and undergo a credit assessment.

The payment provider determines whether invoice payment is available and communicates the applicable payment deadline and terms.

Customers are responsible for paying invoices by the specified due date. Late payment fees or interest may apply according to the provider's terms and applicable legislation.

For information about invoice documentation and payment corrections, see Invoices & Receipts.

Instalment Payments

Eligible customers may be offered instalment plans that allow a purchase to be paid over several months.

Instalment plans are provided by external financial service partners and may involve interest, administrative fees, or other credit costs.

The total cost of credit, payment schedule, and applicable conditions must be presented before the customer enters into the agreement.

Customers should review these terms carefully. PixelForge does not independently approve credit applications or determine the payment provider's credit decisions.

Payment Confirmation

After a successful purchase, PixelForge sends an order confirmation to the email address supplied during checkout.

An order confirmation normally includes the order number, purchased products, total price, selected delivery method, and payment status when available.

Receiving an order confirmation does not necessarily mean that the products have already been dispatched. Orders may still require payment verification, stock confirmation, or warehouse processing.

Failed or Interrupted Payments

A payment may fail because of insufficient funds, incorrect payment details, expired cards, authentication problems, or temporary interruptions at the payment provider.

Customers who encounter a payment error should first check whether the transaction appears in their bank or payment application.

If the payment appears to have been completed but no order confirmation arrives, customers should contact PixelForge support before placing another order. This helps prevent duplicate purchases.

Changing a Payment Method

Once an order has been confirmed, changing the payment method may not be possible. Customers should contact support if they need assistance with a payment-related issue.

For some orders, cancellation and placement of a new order may be necessary, provided the original order has not already been dispatched.

Refunds and Payment Providers

Refunds are normally returned through the original payment method. For card payments, banks may require several business days to complete the transaction.

Invoice and instalment refunds may involve adjustments to an outstanding balance or reimbursement of payments already made.

For complete refund procedures, see Refund Process. For information about payment protection and fraud prevention, consult Payment Security.
