TECHNICAL SUPPORT

Contacting Technical Support

PixelForge provides customer support for questions about orders, product compatibility, technical problems, returns, and warranty claims. Our support team aims to help customers identify problems, understand available solutions, and determine when a product requires further inspection.

Providing clear information when submitting a support request helps reduce unnecessary communication and may lead to faster resolution.

Available Support Channels

Customers can contact PixelForge through the support contact form available on the website or by sending an email to support@pixelforge.example.

The contact form is recommended for technical problems because it allows customers to include order information and a detailed description of the issue.

PixelForge does not currently provide telephone-based technical troubleshooting or live chat with human support agents.

Customers should avoid sending the same request through multiple channels unless additional information is necessary.

Support Opening Hours

PixelForge customer support operates Monday through Friday, from 09:00 to 17:00 Swedish local time, excluding Swedish public holidays.

Customers may submit requests outside these hours, but responses are normally handled during the next available support period.

Support opening hours do not necessarily correspond to warehouse processing times or shipping provider schedules.

Expected Response Times

PixelForge aims to provide an initial response to ordinary support requests within two business days.

More complex technical issues, warranty investigations, or cases requiring information from manufacturers may take longer to resolve.

An initial response does not necessarily mean that the entire issue has been resolved. Support may need additional information or testing before recommending a solution.

During periods of unusually high demand, response times may be longer than normal.

Information to Include in a Support Request

Customers should include their order number when the request concerns a purchase made through PixelForge.

For technical problems, the request should also identify the product model, describe the symptoms, and explain when the issue first occurred.

Useful additional information may include error messages, photographs, hardware specifications, and a list of troubleshooting steps already attempted.

For example, a customer reporting that a gaming PC does not display an image should mention whether the computer powers on, whether the monitor works with another device, and which display connection is being used.

Customers should not include account passwords, payment card security codes, or other sensitive credentials.

Support for Products Purchased Elsewhere

PixelForge primarily provides technical support for products purchased through our own online store.

Customers who purchased a product from another retailer should normally contact the original seller for assistance with statutory consumer claims.

PixelForge may provide general product information when available, but cannot guarantee troubleshooting, repairs, or warranty administration for purchases made elsewhere.

Remote Troubleshooting

Some problems can be resolved through written instructions without returning the product.

Support may recommend checking cables, reviewing system settings, installing official drivers, or performing other safe diagnostic procedures.

Customers should only follow troubleshooting instructions they understand and feel comfortable performing.

PixelForge support will not ask customers to disclose their passwords or disable important security protections without a clearly explained and legitimate reason.

If a problem cannot be resolved remotely, the support team may recommend further inspection or a warranty assessment.

Warranty and Repair Cases

When a hardware defect is suspected, PixelForge may request additional information to determine whether the problem can be resolved through troubleshooting or requires physical inspection.

If a return is necessary, support will provide shipping instructions and explain how the product should be packaged.

For accepted statutory complaints, reasonable return shipping costs are covered according to applicable consumer protection requirements.

Customers should back up personal files before returning computers or storage devices whenever reasonably possible.

For complete information about warranty coverage and statutory complaint rights, see Warranty Policy.

Following Up on an Existing Case

Customers who have already contacted support should include their existing case reference when sending additional information.

Using the same email conversation or support case helps the support team review previous messages and troubleshooting results.

If the customer has not received an initial response within two business days, they may follow up using the original support channel.

Customers should check their spam folder before submitting a follow-up request.

Urgent Safety Problems

Customers should immediately stop using a product that produces smoke, sparks, a burning smell, or signs of dangerous electrical failure.

The product should be disconnected from electrical power if this can be done safely.

Customers should not attempt to open or repair damaged power supplies, batteries, or other potentially hazardous electrical components.

If there is an immediate danger to people or property, customers should contact the appropriate emergency services rather than waiting for a support response.

Questions About Orders and Deliveries

Technical support can also help direct customers to the appropriate information about order processing, delivery delays, missing packages, and cancellations.

Customers seeking information about an existing shipment should provide their order number and tracking number when available.

For delivery estimates, see Delivery Times. For shipment status information, see Order Tracking. For cancellation requests, consult Cancelling an Order.

Privacy and Support Correspondence

PixelForge processes personal information provided in support requests for the purpose of handling customer inquiries and fulfilling relevant legal obligations.

Support correspondence may contain order references, contact details, and technical information about the affected product.

Customers should avoid including unnecessary personal information and should remove sensitive files or credentials from attachments.

For information about personal data processing and customer rights, see Personal Data & GDPR.
